In the late 20 th Century the first software application (LCC) was developed by Camfil R&D to help users of air filters to select the best solution in terms of IAQ and energy performance. This was followed by additional applications, designed for different applications and products.
	in air handling systems. Today the CFSS contains analysis and optimization tools for a wide range of fitter applications. Regardless if clean air is needed for Clean Process, POWER generation or an Office space - the solutions is often just a few clicks away.
