

ADVANTAGES

- Multiple units can be combined for bigger air volumes
- Optional HEPA filter available
- Suitable for continuous 3-shift operation
- Highly efficient, multi-stage filtration
- Self-cleaning filtration media using the drainage effect
- Flexible and modular design

Application	The Handte EM Expert extracts and separates coolant mist from industrial applications like turning, drilling, milling, cutting, roughing or grinding.
Installation Options	Designed as a modular system, different modules of the coolant mist separator Handte EM Expert can be combined to a larger central extraction system for larger air volumes. Also the system can be extended afterwards according to the growth of the production capacity to meet the customers requirements at every time.
Comment	The CoaPack filter elements combine maximum filter area with a compact design. The construction ensures a homogeneous flow and optimal utilisation of diffusion and coalescence - a significant separation mechanism for ultra-fine coolant mists. The small load acting on the filter surface reduces the energy consumption and significantly increases the service life of the filter elements. The high filtration efficiency of the coolant mist extraction units Handte EM Expert are attributable to the maximum possible balance between separation performance and regeneration of the separated cooling lubricants from the filter media. This goal is achieved by using drainage-friendly materials in connection with special drainage support mats, protective screens, and spacers. The separated cooling lubricant is released from the filter media and drains to the fluid return sump at the base of the unit. Through either a recirculation pump or siphon, the collected coolant can be returned for treatment, reuse or disposal. The flow direction of the filter media further supports the draining of the dirty air.

High-End, High-Efficiency, Modular Coolant Mist Collector:

With advances in technology, machine tool productivity and accuracy continues to improve. As a result, there's an increasing need to collect ultra-fine mists and fumes. To ensure worker safety, production efficiency, and the protection of capital plant and equipment, compliance with workplace exposure limits cannot be compromised. The Handte EM Expert provides optimum results even in the most challenging conditions.
